

# HOW TO MEASURE YOUR KITCHEN

## STEP 1

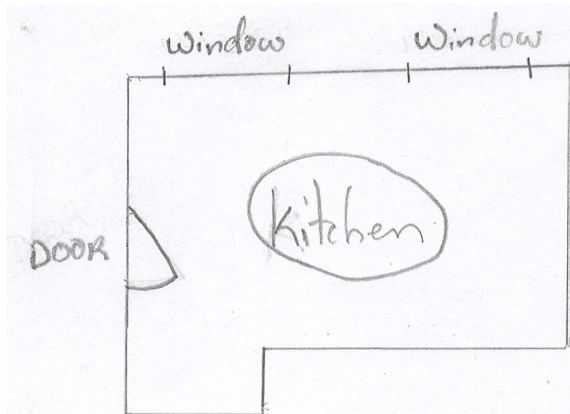

Make a rough sketch of your room, large enough to fit all the measurements and notes.

For door ways, draw the door way according to which way the door swings.

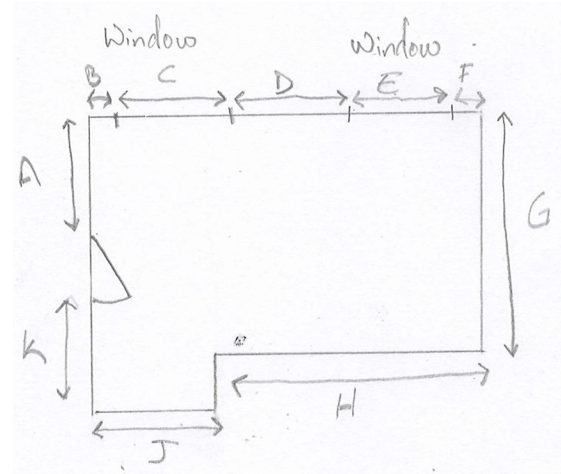

## STEP 2

Sketch any obstructions, for instance; pipes, sink, plumbing, columns etc that you either cannot move or do not want to move.

## STEP 3

Start in one corner and measure around the room along each until every wall, window & door has been measured..

## STEP 4

Draw the location of all appliances and write the sizes in inches.
